

Modular manifold **SL 1" MANIFOLD - TOP**

Premounted complete manifold SL with flowmeter, manual air vent, flat brackets.

Modular supply and return manifold realized in glass fibre reinforced polyamide, with easy installation thanks to the screw and lock system, including: manual intercepting valves with micrometric flow regulator for each circuit, load/drain cock, manual or automatic air vent, supply flow meter 0-5 l/min for every circuit, main flow and return thermometers, wall and cabinet fixing brackets. Resistant to corrosion and aging self-insulating through integrated air chambers. Pre-arranged for mounting actuation heads on each circuit.

- lightweight and robust manifold made of rein forced polyamide
- ideal for heating and cooling
- the easiest way to assemble a manifold: just screw & lock
- ready to mount actuators
- installation without special tools
- slim design (depth < 80 mm)
- modular: possibility to add and remove single modules
- safety first: integrated safety clips to assemble your manifold
- insulated by integrated air chambers
- internal insulated pipe outlets
- all the components are sealed by double internal O-rings
- reversible: main connection left or right as desired on installation site
- modules turnable up and down
- room labeling clips
