

Modular manifold **ELITE 1 1/4"**

Manifold Elite with flowmeter, manual air vent, brackets.

Preassembled modular output/return manifold in reinforced polyamide. Ready for mounting the actuators on every circuit. 1" 1/4 GAS. The manifold is made up of several modules for every single circuit. The modules can be easily assembled without using special tools or specific components which fit only for a certain manifold length, allowing the plumber to modify the number of attachments even on site. Several inserts facilitate the modules fixing, since they have the same graphic continuity of the manifold, giving a structurally compact manifold.

The intercepting valves do not disturb the fluid motion in the manifold, since they are to the side of it. It makes the whole manifold better balanced and easier to calibrate. The valves also make the pipes fixation easier because the return pipes don't need to cross behind the flow manifold, as usually happens.
